Backend Improvements - Edit Faster

By [Roger Keays](#), 12 July 2012

Hey there,

Today we've deployed some changes to the backend to help you get around a bit faster. We have added a **tabbed masthead menu** at the top of the page which replaces the old drop-down ones. The problem with the old menu was that it hid all the features of our software.

Take a look at the screenshots below of the new masthead. You'll **see all the links** you need in the masthead and have **more space on the screen** to do your edits and updates.

With this update, we've dropped support for Internet Explorer 7. Facebook and Google dropped IE7 over a year ago, so we'll be surprised if you still have it. Nevertheless, if you do login with IE7 you will see the message with links to upgrade your browser.

Did you know that your Internet Explorer is out of date?

To get the best possible experience using our website we recommend that you upgrade to a newer version of other web browser. A list of the most popular web browsers can be found below.

Just click on the icons to get to the download page

Feel free to send any feedback on the masthead to support@SunburntSEO.com. We always welcome constructive feedback.

Roger
