[New Feature] Secure Webmail

By [Sunburnt Technology](#), 28 February 2016

Dear Sunburnt Customers,

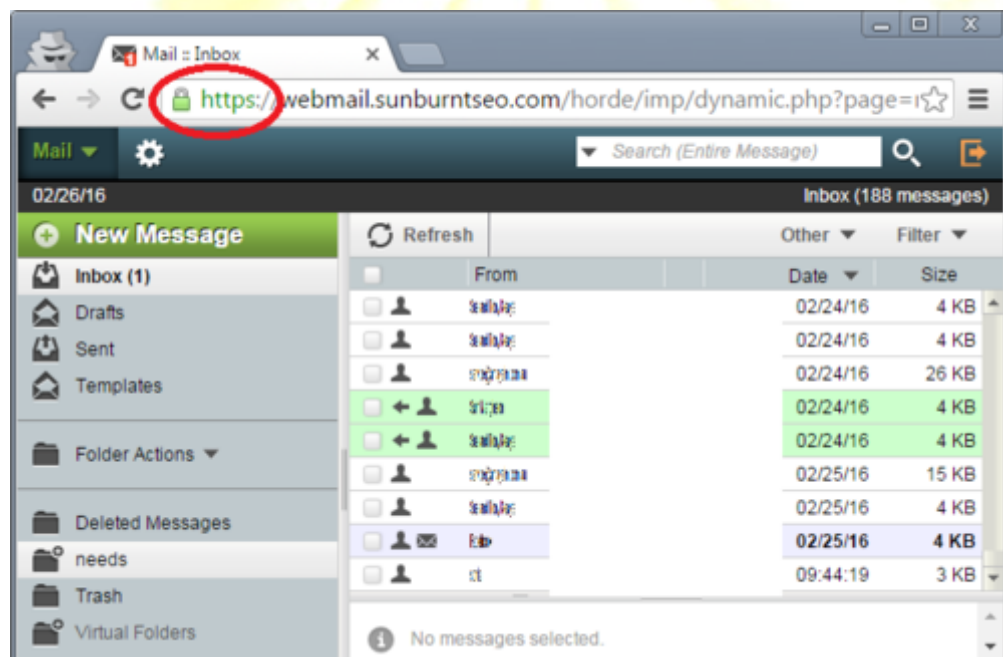

We're happy to announce we've upgraded our webmail server to use **2048-bit https (secure) encryption**. This means you can safely access webmail without worrying that your mail, or password, is being snooped on.

This is good news for frequent travelers, because while your home ISP is unlikely to be mining your data, foreign ISPs may not be as friendly. Spammers, for example, have incentive to steal passwords so they can use legitimate email accounts for sending spam.

To access your webmail, login to your account and select 'webmail' from the 'email' menu. You can also go to:

webmail.sunburntseo.com

Using the direct link, you will notice the new "lock" symbol, indicating that your connection is secure.

Web encryption is becoming increasingly important, and this upgrade is just one of our planned improvements to protect your data and your privacy. If you have any questions, please don't hesitate to contact us by replying to this email.

About Sunburnt Technology

Sunburnt Technology has been helping businesses reach customers around the world since 2003. Our integrated Internet Business Platform includes [SEO Tools](#), Web Analytics, [Content Management](#), [Website Designer](#), [Email Marketing](#), [Online Store](#), [Domain Name Management](#) and more.
